Key Takeaways

- ▶ SELECT provides 4 years of observation in a diverse population of over 17,000 people
- ▶ These additional long-term safety and efficacy data support the known profile of semaglutide and the wider GLP-1RA class
- ▶ Tolerability is well known, and there are steps that can be taken in clinical practice to manage common GI side effects
- ▶ With no new safety signals, SELECT reinforces this and helps to build confidence in using this class in everyday practice
